

Figure 1. Line drawing of *Ivesia webberi* by Bobbi Angell (from Cronquist *et al.* 1997).

Figure 2. *Ivesia webberi* at site CA3, in full flower on 2 June 1998. All photographs by Carol W. Witham. See Appendix 1 tables for site description.

Figure 3. Single head of *Ivesia webberi* from plant shown in Figure 1, 2 June 1998.

Figure 4. View to the northwest from the upper edge of *Ivesia webberi* Site 1. Note the recent blading of the road through this privately owned parcel, 3 June 1997.

Figure 5. View of *Ivesia webberi* Site 3, 14 June 1991. This private property has since been fenced and was not revisited during the 1997-1998 surveys.

Figure 6. View looking southeast from the edge of *Ivesia webberi* Site 4. The grassy area in the foreground is the population, 2 June 1997.

Figure 7. View looking south into *Ivesia webberi* Site 5. This site is the largest in Nevada for both area and population size, 16 June 1997.

Figure 8. Overlooking *Ivesia webberi* Site 6. The population is on the sparsely vegetated flat before the ridge. Note Reno in the background, 11 June 1997.

Figure 9. *Ivesia webberi* Site 7 in Douglas County is the southern-most in this species's range. Note Highway 395 in the background, 10 June 1997.
